ABOUT ME

I am an IT professional in the final stage of my studies, with a strong interest in technological innovation, software development, and DevOps. In my current role, I contribute to projects focused on optimizing and automating business and banking processes, primarily using Python. At my free time, I am mainly focused on expanding my knowledge of DevOps technologies, infrastructure, and automation, while also deepening my understanding of computer networks and preparing for the CCNA certification. I have several years of experience in full-stack development, during which I have also built several personal projects. I am proactive, responsible, and solution-oriented. I enjoy continuously expanding my knowledge and applying it in practice when tackling new technical challenges.

WORKING EXPERIENCES

Banka Sparkasse d.d.

IT Developer & Analyst

November 2025 – today

- Analysis of internal processes and development of Python automation scripts, including scheduling and basic monitoring
- Co-led a bank-wide project to define internal software development standards, including documentation templates, code organization, secure Python development practices, and clear ownership, backup, and maintenance procedures for automation scripts.
- Gaining practical experience in developing UiPath RPA solutions for the automation of repetitive business processes.
- Apple Pay project – preparation and configuration of test devices, execution of test scenarios, formatting of project documentation and verification of Apple device functionality and operating logic.
- Identity and Access Management (IAM), including the assignment of user permissions and management of access rights across the bank.

IT Support Technician

December 2025 – May 2026

- Receiving, resolving, and tracking employees' technical support requests.
- Distribution of IT equipment and troubleshooting technical issues.
- Administration of user accounts, passwords, permissions, and access rights.
- Ensuring compliance with the bank's security policies.

Celtra d.o.o.

January 2026

Frontend programmer – project work

- Integration of online advertisements across various websites, including technical adaptation and optimization of front-end code to ensure the best possible user experience.

FORMAL EDUCATION

University of Primorska, Faculty of Mathematics, Natural Sciences and Information Technologies

October 2020 – today

3/3. year Computer Science (University Program)

- 29/30, Linear Algebra, Final thesis

General Secondary School Moste

September 2017 – June 2020

KNOWLEDGE, SOFT SKILLS, LANGUAGES AND OTHER INTERESTS

- **Knowledge:**

Python (OOP, Multithreading)

Java (OOP, Multithreading)

HTML, CSS, JavaScript

Frontend frameworks (Vue, React)

Backend frameworks (Express, Fast API)

SQL (basics)

Git, Github, Bash, Terminal

Cisco CCNA (learning in progress)

Rest Api architecture

Docker, containerization (entry)

- **Soft Skills:**

Openness and strong communication skills

Adaptability and eagerness to learn

Strong analytical thinking

Creativity and innovation

Collaboration and teamwork

Strong organizational skills

- **Languages:**

Slovene (native)

English (B2)

Serbo-Croatian (B2)

Italian (B1)
